

## Profile Customization with PHP

This example modules shows how to use the power of PHP modularization. User's will have ability to register an account and modify personal information along with color theme.

### Setup Instructions:

1) Unzip week10.zip and edit: conn.php

```
<?php
$host="localhost"; // Host name
$username="ckonkol"; // Mysql username
$password="techno"; // Mysql password
$db_name="ckonkol"; // Database name
// Connect to server and select database.
mysql_connect($host, $username, $password)or die("cannot connect
server ");
mysql_select_db($db_name)or die("cannot select DB");
?>
```

4) Upload folder to your site

4) Browser out to the setup tables

example:

<http://www.yoursite/week10/setup>

5) Once tables successful delete 'setup' folder

6) The user: admin is created by default with the password: admin
