

# iPad/iPhone Apps Spring 2014

The below iOS apps are being developed this semester by students at Rock Valley College. Good job! - Prof Konkol, instructor

## **Map Logger**

**Utility App.** Gives user the ability to "write" on a map (Google maps or Apple maps) similar to the method we used in the old days with a highlighter or magic marker on paper maps. The intent is to log all roads including railroads (and maybe even approximated flight paths ) that one has traveled on.

## **Tower Defense Game**

**Game App.** Basic game mechanics entail placing defenses strategically to ward off waves of oncoming attackers, who are trying to destroy your base.

## **Virtual Scrapbook:**

**Utility App.** The app would virtually keep track of important things like sleeping patterns, bowel movements and feeding habits.

## **Restaurant Table Notification**

**Business App.** notify people when their table is ready and the don't have to be confined to a certain area due to modern day table buzzers

## **Golf Handicap**

**Utility App.** This app calculates golf handicap

## **What's In the Freezer**

**Utility App.** Everything purchased has a bar code. Using their iPhone/iPad/iTouch device, a person can scan the barcode, select from a product list combo box, select the sub-product from a combo box, select the weight, select which freezer it was put in (kitchen or other), and auto enter the date it was scanned as the purchase or freeze date.

## **Tap Tuning**

**Music App.** Select local Rockford radio stations to listen to.
